ACLS Study Guide - E-Book Barbara J Aehlert 2016-10-06
Awarded second place in the 2017 AJN Book of the Year Awards in the Critical Care-Emergency Nursing category. Provide the best possible emergency cardiovascular care – using the newest ECC guidelines! *ACLS Study Guide, 5th Edition* offers a complete, full-color overview of advanced cardiovascular life support. An easy-to-read approach covers everything from airway management to cardiac arrest rhythms and their management, electrical therapy, acute coronary syndromes, and acute stroke. In addition to the latest ACLS treatment algorithms, this edition includes case studies and hundreds of full-color photos and illustrations. Case studies present common, realistic clinical situations, helping you learn and apply skills in cardiac rhythm interpretation, medication administration, and other essential interventions. *ACLS Pearls* boxes offer brief explanations of complex topics and useful tips for clinical practice. End-of-chapter quizzes include answers and rationales, helping you learn and remember the most important information. Easy-to-understand approach simplifies your study of advanced cardiac life support, thanks to Barbara Aehlert's unique, conversational writing style. NEW! UPDATED content centers on evidence-based practice recommendations,

including the 2015 American Heart Association Guidelines for Cardiopulmonary Resuscitation and Emergency Cardiovascular Care and the 2015 International Consensus on Cardiopulmonary Resuscitation and Emergency Cardiovascular Care Science With Treatment Recommendations. NEW! Improved format integrates all case studies into the appropriate chapters, so that you can apply concepts immediately to real-world situations. *Evidence-Based Critical Care* Robert C. Hyzy 2017-05-30
This book provides learners with a unique opportunity by virtue of the format outlined above. Each case presentation has a case vignette, which leads up to an important clinical question, and is followed by additional discussion which resolves the question posed. This is a new way to present knowledge in a medical book and should help critical care practitioners, fellows, residents, allied health professionals and students expand their critical care knowledge in an efficient and effective manner. This approach should also benefit those preparing for board examinations.

Pierson and Fairchild's Principles & Techniques of Patient Care - E-Book Sheryl L. Fairchild 2017-03-24
Master the basics of rehab patient care with Pierson and Fairchild's *Principles & Techniques of Patient Care, 6th Edition*. This proven text not only provides clear "how-to" information on everything from positioning and

draping to patient transfers and ambulation activities, but it also includes easy-to-understand rationales explaining the "why" behind these proven techniques. This new edition has been thoroughly updated to reflect the most current accepted patient care standards, principles, and techniques. Plus, additional video clips and expanded learning resources will help ensure you have a solid mastery of patient care in the rehabilitation setting. Content based on the World Health Organization's ICF model (International Classification of Functioning, Disability, and Health) – the model currently endorsed by the APTA and AOTA – ensures you are referencing information that stems from the most current theories and practice guidelines of physical and occupational therapy. Procedures boxes with clear written instructions are accompanied by full-color illustrations on performing a variety of proven techniques and patient care tasks such as proper lifting techniques, patient transfers, basic wound care, and assessment of vital signs. Insights into the rationales and physiological principles explain why specific techniques and procedures are used. More than 800 full color photographs clearly demonstrate proper performance of techniques and procedures used in the assessment and management of patients in the rehabilitation setting. Guidelines, principles, and precautions boxes throughout the text offer additional tips for optimal assessment and management of patients in the rehabilitation setting. Self-study and problem solving (case study) activities conclude each chapter to help you understand important concepts and improve your decision-making and problem solving skills. Video clips on companion Evolve website demonstrate the techniques and procedures described in the text. Content on professionalism and the concept of professional values and ethics reinforce existing workplace guidelines and how to apply those guidelines to your patient interactions. Online user resources on the companion Evolve website feature video clips and additional activities for you to hone your skills. (What additional activities?) NEW! Procedures

index lists all of the procedures covered in the text to help you quickly locate procedure descriptions while working in the clinical setting. NEW! Additional video clips demonstrate patient transfers, ambulation with aids, donning and doffing PPE, and maneuvering a wheelchair. NEW! Video clip table of contents lists over 30 video clips in the front matter of the text.

Anesthesiology Critical Care Board Review George Williams 2019-09-16 Anesthesiology Critical Care Board Review fills a much-needed niche, not only in improving board examination test-taking skills but also as a tool for educating critical care physicians, anesthesiology practitioners, and advanced practice providers with the most relevant, up-to-date, state of the art considerations in critical care medicine. Content is specifically designed to prepare Anesthesiology and Emergency Medicine critical care fellows for the American Board of Anesthesiology Critical Care Medicine Certification Examination. The book offers diagnostic and therapeutic management considerations, divided into sections on technical aspects of critical care and organ systems, in a question-and answer format with clear, concise explanations and targeted references for each question.

Strategies to Improve Cardiac Arrest Survival Institute of Medicine 2015-09-29 Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue – local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac

arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

The contributions are structured in topical sections on history of SCIA; motion analysis and 3D vision; pattern detection and recognition; machine learning; image processing and applications; feature extraction and segmentation; remote sensing; medical and biomedical image analysis; faces, gestures and multispectral analysis.

International Arbitration in the United States Laurence Shore 2016-04-24 International Arbitration in the United States is a comprehensive analysis of international arbitration law and practice in the United States (U.S.). Choosing an arbitration seat in the U.S. is a common choice among parties to international commercial agreements or treaties. However, the complexities of arbitrating in a federal system, and the continuing development of U.S. arbitration law and practice, can be daunting to even experienced arbitrators. This book, the first of its kind, provides parties opting for "private justice" with vital judicial reassurance on U.S. courts' highly supportive posture in enforcing awards and its pronounced reluctance to intervene in the arbitral process. With a nationwide treatment describing both the default forum under federal arbitration law and the array of options to which parties may agree in state courts under state international arbitration statutes,

this book covers aspects of U.S. arbitration law and practice as the following: .institutions and institutional rules that practitioners typically use; .ethical considerations; .costs and fees; .provisional measures; and .confidentiality. There are also chapters on arbitration in specialized areas such as class actions, securities, construction, insurance, and intellectual property.

The ESC Textbook of Sports Cardiology Antonio Pelliccia 2019-03-14 Sports and exercise have been intensely advocated as protective lifestyle measures which prevent or reduce the risk of severe health issues, including cardiovascular disease. More extreme forms of sports (for instance at high altitudes) have been identified as an important way of promoting cardiovascular adaptation, but have also been associated with adverse effects and even major cardiovascular events in predisposed individuals. Participating in more commonplace sports and exercise, such as football, may also increase a person's risk of cardiac events. This publication is timely in the light of a burgeoning number of clinical papers in the field. The ESC Textbook of Sports

Cardiology provides an overview of the detection and treatment of cardiovascular disease in elite athletes and young sports professionals in training, as well as prevention. It will be useful for clinical cardiologists, sports physicians, and general physicians alike. Split into 11 key areas in sports cardiology, ranging from sudden cardiac death in athletes to the most common cardiovascular abnormalities seen in athletes, and to the effects of substance abuse and doping, the text is an invaluable resource covering all aspects of sports cardiology. Access to the digital version of the textbook is included with purchase of the printed version. Highly illustrated with embedded multimedia features, together with cross-referenced links to related content and primary research data in major journals in the field, the digital version provides users with a dynamic and forward-thinking resource. The ESC Textbook of Sports Cardiology is the second textbook from the European Association of Preventive Cardiology (EAPC) and aligns with ESC clinical practice guidelines and EAPC recommendations and position papers.

Resuscitate! Mickey S. Eisenberg, M.D. 2013-05-15 Sudden cardiac arrest is the leading cause of death among adults, yet it need not be fatal. Though survival in most communities is very poor, a few communities achieve rates as high as 50%. Why are some communities so successful in snatching life from the jaws of death? Resuscitate! describes the steps any EMS system can take to improve cardiac arrest survival. It is written for the medical directors, administrative directors, fire chiefs, dispatch directors, and program supervisor who direct and run EMS systems all across the country, and for the EMTs, paramedics, and dispatchers who provide frontline care. This second edition of Resuscitate! provides fifteen concrete steps to improve survival. Four steps will lead to rapid improvements at the local level and are relatively easy to implement. Six additional steps are more difficult to implement but also likely to improve survival. The remaining steps

recommend changes at the national level. Resuscitate! is the official textbook for the Resuscitation Academy, held twice a year in Seattle. Cosponsored by Seattle Medic One, King County EMS, and the Medic One Foundation, the Academy draws attendees from throughout the world for two intensive days of classes, demonstrations, and workshops to acquire the knowledge and tools to improve survival in their own communities. This new edition includes lessons learned from attendees of the Academy as well as from the faculty's evolving thoughts on how to measure performance and improve survival, one community at a time. It also includes an addendum on the Resuscitation Academy (resuscitationacademy.org). For more than thirty years, Mickey S. Eisenberg M.D., Ph.D. , has played a leading role in developing King County, Washington's emergency response to cases of sudden cardiac arrest, a system recognized as among the very best in the nation. He is a professor of medicine at the University of Washington and serves as the medical director of King County Emergency Medical Services.

Bystander CPR Anette Nord 2017-10-31 Background: It has been proved that bystander cardiopulmonary resuscitation (CPR) saves lives; however, which training method in CPR is most instructive and whether survival is affected by the training level of the bystander have not yet been fully described. Aim: To identify the factors that may affect 7th grade students' acquisition of CPR skills during CPR training and their willingness to act, and to describe 30-day survival from outof- hospital cardiac arrest (OHCA) after bystander CPR and the actions performed by laymen versus off-duty medically educated personnel. Methods: Studies I-III investigate a CPR training intervention given to students in 7th grade during 2013-2014. The classes were randomized to the main intervention: the mobile phone application (app) or DVD-based training. Some of the classes were randomized to one or several additional interventions: a practical test with feedback, reflection, a web course, a visit from elite athletes and automated external defibrillator (AED) training. The students' practical skills, willingness to act and knowledge of stroke symptoms, symptoms of acute myocardial infarction (AMI) and lifestyle factors were assessed directly after training and at 6 months using the Laerdal PC SkillReporting system (and entered into a modified version of the Cardiff test scoring sheet) and a questionnaire. The Cardiff test resulted in a total score of 12-48 points, and the questionnaire resulted in a total score of 0-7 points for stroke symptoms, 0-9 points for symptoms of AMI and 0- 6 points on lifestyle factors. Study IV is based on retrospective data from the national quality register, the Swedish registry of cardiopulmonary resuscitation, 2010-2014. Results: A total of 1339 students were included in the CPR training intervention. The DVD-based group was superior to the app-based group

in CPR skills, with a total score of 35 (SD 4.0) vs 33 (SD 4.2) points directly after training ($p<0.001$) and 33 (SD 4.0) vs 31 (SD 4.2) points at six months ($p<0.001$). Of the additional interventions, the practical test with feedback had the greatest influence regarding practical skills: at six months the intervention group scored 32 (SD 3.9) points and the control group (CPR only) scored 30 (SD 4.0) points ($p<0.001$). Reflection, the web course, visits from elite athletes and AED training did not further increase the students' acquisition of practical CPR skills. The students who completed the web course Help-Brain-Heart received a higher total score for theoretical knowledge in comparison with the control group, directly after training: stroke 3.8 (SD 1.8) vs 2.7 (SD 2.0) points ($p<0.001$); AMI 4.0 (SD 2.0) vs 2.5 (SD 2.0) points ($p<0.001$); lifestyle factors 5.4 (SD 1.2) vs 4.5 (SD 2.0) points $p<0.001$. Most of the students (77% at 6 months), regardless of the intervention applied, expressed that they would perform both chest compressions and ventilations in a cardiac arrest (CA) situation involving a relative. If a stranger had CA, a significantly lower proportion of students (32%; $p<0.001$) would perform both compressions and ventilations. In this case, however, many would perform compressions only. In most cases of bystander-witnessed OHCA, CPR was performed by laymen. Off-duty health care personnel bystanders initiated CPR within 1 minute vs 2 minutes for laymen ($p<0.0001$). Thirty-day survival was 14.7% among patients who received CPR from laymen and 17.2% ($p=0.02$) among patients who received bystander CPR from off-duty health care personnel. Conclusions: The DVD-based method was superior to the app-based method in terms of teaching practical CPR skills to 7th grade students. Of the additional interventions, a practical test with feedback was the most efficient intervention to increase learning outcome. The additional interventions, reflection, web course, visit from elite athletes and AED did not increase CPR skills further. However, the web course Help-Brain-Heart improved the students' acquisition of

theoretical knowledge regarding stroke, AMI and lifestyle factors. For OHCA, off-duty health care personnel bystanders initiated CPR earlier and 30-day survival was higher compared with laymen bystanders.

Critical Care Medicine E-Book Joseph E. Parrillo 2018-11-12 Now completely revised to bring you up to date with the latest advances in the field, *Critical Care Medicine: Principles of Diagnosis and Management in the Adult*, 5th Edition, delivers expert, practical guidance on virtually any clinical scenario you may encounter in the ICU. Designed for intensivists, critical care and pulmonology residents, fellows, practicing physicians, and nurse practitioners, this highly regarded text is clinically focused and easy to reference. Led by Drs. Joseph Parrillo and Phillip Dellinger, the 5th Edition introduces numerous new authors who lend a fresh perspective and contribute their expertise to that of hundreds of top authorities in the field. Includes new chapters on current applications of bedside ultrasound in the ICU, both diagnostic and procedural; mechanical assist devices; and extra-corporeal membrane oxygenation (ECMO). Contains new administrative chapters that provide important information on performance improvement and quality, length of stay, operations, working with the Joint Commission, and more. Features new images that provide visual guidance and clarify complex topics. Keeps you up to date with expanded chapters on echocardiography in the ICU and valvular heart disease, including TAVR. Includes separate chapters on mechanical ventilation of obstructive airway disease and acute respiratory distress syndrome (ARDS) – including the many recent changes in approach to positive end expiratory pressure setting in ARDS. Covers key topics such as patient-ventilator synchrony and non-invasive ventilation for treating chronic obstructive pulmonary disease patients with acute respiratory failure. Reflects the recent literature and guidance on amount of fluids, type of fluid, vasopressor selection, mean arterial pressure target, and decision on steroid use in

septic shock. Provides questions and answers in every chapter, perfect for self-assessment and review.

Tabbner's Nursing Care Gabby Koutoukidis 2016-08-10 The only text in the market written specifically for Diploma of Nursing students in Australia and New Zealand. Medical-Surgical Nursing – E-Book Donna D. Ignatavicius 2017-09-09 Awarded second place in the 2018 AJN Book of the Year Awards in Medical-Surgical Nursing! Healthcare is evolving at an incredible pace and with it, the roles and responsibilities of the medical-surgical nurse. Ensure you are fully equipped to thrive and adapt in

this ever-changing nursing environment with Ignatavicius, Workman, and Rebar's Medical-Surgical Nursing: Concepts for Interprofessional Collaborative Care, 9th Edition. This trendsetting text not only covers all essential adult health knowledge, but also reinforces the application, conceptual thinking, and clinical judgment skills that today's nurses need to stay one step ahead in delivering exceptional patient care, no matter the environment. As with previous "Iggy" editions, you'll find a unique collaborative care approach to adult health nursing, a thorough integration of QSEN competencies, extensive NCLEX® Exam preparation, and a direct, reader-friendly tone throughout the text. This ninth edition incorporates two emerging and complementary trends – the Core Competencies for Interprofessional Collaborative Practice and a more conceptual approach teaching and learning – areas that will ground you in how to think like a nurse and how to apply the knowledge you gain from the text to clinical practice. There are a lot of med-surg nursing texts out there, but there's only one that combines all the information, concepts, and on-the-job realities in a way that makes perfect sense: "Iggy!" Trendsetting QSEN integration emphasizes patient safety and evidence-based practice with Nursing Safety Priority boxes, including Drug Alerts, Critical Rescues, and Action Alerts. UNIQUE! Emphasis on clinical judgment helps you develop skills in clinical reasoning and clinical decision-making when applying concepts to clinical situations. Strong emphasis on NCLEX Exam preparation includes chapter-opening Learning Outcomes and chapter-ending Get Ready for the NCLEX Examination! sections organized by NCLEX Client Needs Categories, plus NCLEX Examination Challenge questions, with an answer key in the back of the book and on the Evolve companion website. Exceptionally readable content features shorter sentences, straightforward vocabulary, and a direct, reader-friendly writing style. *Small Animal Emergency and Critical Care for Veterinary Technicians* – E-Book Andrea Battaglia 2020-08-01 Master

the veterinary technician's role in caring for critically ill or injured pets! *Small Animal Emergency and Critical Care for Veterinary Technicians, 4th Edition* provides quick access to dozens of common, life-saving protocols and procedures. Each treatment technique is described in step-by-step detail and illustrated in full color. To prepare you for the veterinary setting, a team approach is emphasized. This edition adds three new chapters and includes practical, easy-to-apply medical math and scenario-based exercises. Written by experienced veterinary technicians Andrea Battaglia and Andrea Steele, this resource prepares you for success on the VTNE, in veterinary practices, and in animal hospital emergency departments. Step-by-step instructions show how to perform specific procedures and techniques, guiding you through key assessment and treatment techniques. Technician Notes highlight specific procedures, with diagrams, photos, and detailed instructions, providing at-a-glance guidance for students and practicing vet techs. Comprehensive coverage of pain management, respiratory emergencies, and urologic emergencies provides cutting-edge treatment options for a wide variety of commonly seen presenting problems. Review and preparation for the VTNE (Veterinary Technician National Examination) is provided by Medical Math exercises and questions based on real-world scenarios. Coverage of equipment and techniques includes the latest advances in basic lab equipment, fluid therapy, and oxygen therapy. Equipment lists are provided at the beginning of most chapters, ensuring that you will have the appropriate tools on hand for each type of emergency situation. Practical exercises prepare you for success on the VTNE. NEW! Three new chapters are included: Supporting the Critically Ill or Injured through Physical Rehabilitation Techniques, Fostering Wellbeing in the ER and ICU, and Managing Pharmaceuticals in the ER. NEW! Chapter pretests assess your knowledge and allow you to identify your strengths and weaknesses. NEW and UPDATED photos and illustrations enhance your understanding by accurately depicting the

clinical signs encountered in emergency and critical care.

Cardiovascular E-Book Derek G. Waller 2016-09-13

Cardiovascular Medicine is a new e-book in a collection of subject-themed e-books containing relevant key articles from Medicine. The e-books provide a perfect source of revision for post-graduate exams in clinical medicine and portfolio material for life-long learning. As well as mapping to the UK Core Medical Training curriculum, these e-books also enable anyone with a short-term interest in a specific area to buy individual articles at a price-point that will give affordable access to all readers (from medical students to GPs and practitioners in related areas). The quality of user experience on mobiles, tablets and laptops will be an added bonus for learning on the move. The whole board has been involved in the creation of this content and are therefore listed as authors on all the e-books. In addition we extend our warm thanks for their contribution to these e-books to the past Chairman Allister Vale (who stepped down from the board in 2015) and to John Mucklow, who stepped down in 2016. Derek Waller, on behalf of the Editorial Board About the journal The parent journal (www.medicinejournal.co.uk) is a rolling, continuously updated review of clinical medicine over a 4-year cycle covering all the important topics for core medical training. Its Editorial Board comprises some of Europe's most influential specialists. The journal's articles are refreshed, updated, augmented or replaced as appropriate each time the subject is due for revision to provide a concise overview of knowledge and practice core to the curriculum. Each article is written by invited experts and overseen by the relevant subject specialist on the Board. A trainee representative on the Board ensures relevance and accessibility for exam candidates.
