The Complete Corvette Restoration and Technical Guide Noland Adams 2003-03-01 This is a mind-boggling book. For the enthusiast intent upon restoring his Corvette to the look and

condition it enjoyed when it left the factory, it is absolutely essential. For the enthusiast desiring to learn everything - every detail, every nuance which made one Corvette different from another, at model-year changeover, at mid-model, early model-year production, late model-year production - it is the ultimate reference book. This is the history of what happened to the Corvette on the assembly line from 1953 to 1962. It is the story of every Corvette that was produced for a decade. Its engine. Its chassis. Its body. From Powerglide to Positraction to Power Team Combinations. From ignition shielding to hose clamps to identification labels. From windshield wipers to door latch controls to taillight assemblies. It's a bit like a mystery book too, and could almost be recommended to aficionados of that genre regardless of their interest in Corvettes or even cars for that matter. To write this book Noland Adams had to become something of a Sherlock Holmes.

Special Economic Zones in Africa Thomas Farole 2011-01-01 "This book, designed for policymakers, academics and researchers, and SEZ program practitioners, provides the first systematic and comprehensive analysis of SEZ programs in Sub-Saharan Africa. It is the result of detailed surveys and case studies conducted during 2009 in ten developing countries, including six in Sub-Saharan Africa. The book provides quantitative evidence of the performance of SEZs, and of the factors which contribute to that performance, highlighting the critical importance not just of the SEZ itself but of the wider national investment climate in which it functions. It also provides a comprehensive guide to the key policy questions that confront governments establishing SEZ programs, including: if and when to launch an SEZ program, what form of SEZ is most appropriate, and how to go about implementing it. Among the most important findings from the study that is stressed in the book is the shift from traditional enclave models of zones to SEZs that are integrated ? with national trade and industrial strategies, with core trade and social infrastructure, with domestic suppliers, and with local labor markets. Although the book focuses primarily on the experience of Sub-Saharan Africa, its lessons will be applicable to developing countries around the world."

World Development Report 1994 1994 World Development Report 1994 examines the link between infrastructure and development and explores ways in which developing countries can improve both the provision and the quality of infrastructure services. In recent decades, developing countries have made substantial investments in infrastructure, achieving dramatic gains for households and producers by expanding their access to services such as safe water, sanitation, electric power, telecommunications, and transport. Even more infrastructure

investment and expansion are needed in order to extend the reach of services - especially to people living in rural areas and to the poor. But as this report shows, the quantity of investment cannot be the exclusive focus of policy. Improving the quality of infrastructure service also is vital. Both quantity and quality improvements are essential to modernize and diversify production, help countries compete internationally, and accommodate rapid urbanization. The report identifies the basic cause of poor past performance as inadequate institutional incentives for improving the provision of infrastructure. To promote more efficient and responsive service delivery, incentives need to be changed through commercial management, competition, and user involvement. Several trends are helping to improve the performance of infrastructure. First, innovation in technology and in the regulatory management of markets makes more diversity possible in the supply of services. Second, an evaluation of the role of government is leading to a shift from direct government provision of services to increasing private sector provision and recent experience in many countries with public-private partnerships is highlighting new ways to increase efficiency and expand services. Third, increased concern about social and environmental sustainability has heightened public interest in infrastructure design and performance.
