10 Principles To Love Yourself: How to Start your Day and Sleep Peacefully Deepak Gupta

2019-01-06 'At least love yourself before loving others' I know the title is much known to readers, but we disregard the lessons we know much in our lives. When we are born and commence our life, we encounter diverse people with different attributes to achieve our purpose in life. Some teach us lessons while some remains with us, but this is not the way we should live our lives. We think we are candid and the finest curtain in front of the window, but life doesn't work like that. Most of the people waste half of their lives chasing hoax dreams, pretending to be theirs. If you don't know who you are then, you will never be able to know what you will become. 'We occupy many unconscious thoughts in our mind. When we think 100% we should write merely 1% which should be best, precise and useful.'

Third World Protest Rahul Rao

2010-07-08 If boundaries protect

us from threats, how should we think about the boundaries of states in a world where threats to human rights emanate from both outside the state and the state itself? Arguing that attitudes towards boundaries are premised on assumptions about the locus of threats to vital interests, Rahul Rao digs beneath two major normative orientations towards boundaries-cosmopolitanism and nationalism-which structure thinking on questions of public policy and identity. Insofar as the Third World is concerned, hegemonic versions of both orientations are underpinned by simplistic imageries of threat. In the cosmopolitan gaze, political and economic crises in the Third World are attributed mainly to factors internal to the Third World state with the international playing the role of heroic saviour. In Third World nationalist imagery, the international is portrayed as a realm of neo-imperialist

predation from which the domestic has to be secured. Both images capture widely held intuitions about the sources of threats to human rights, but each by itself provides a resolutely partial inventory of these threats. By juxtaposing critical accounts of both discourses, Rao argues that protest sensibilities in the current conjuncture must be critical of hegemonic variants of both cosmopolitanism and nationalism. The second half of the book illustrates what such a critique might look like. Journeying through the writings of James Joyce, Rabindranath Tagore, Edward Said and Frantz Fanon, the activism of 'anti-globalisation' protesters, and the dilemmas of queer rights activists, Rao demonstrates that important currents of Third World protest have long battled against both the international and the domestic, in a manner that combines nationalist and cosmopolitan sensibilities.

Global Governance of Financial Systems Kern Alexander

2005-09-08 The book sets forth the economic rationale for international financial regulation and what role, if any, international regulation can play in effectively managing systemic risk while providing accountability to all affected nations. The book suggests that a particular type of global governance structure is necessary to have more efficient regulation of the international financial system.

The Nature of Moral

Responsibility Randolph Clarke
2015 Recent philosophical work reveals considerable disagreement about what it is to be morally responsible for something. Indeed, some theorists claim to distinguish several varieties of moral responsibility, with different conditions that must be satisfied if one is to bear responsibility of one or another of these kinds. This volume presents twelve original essays from participants in these debates. The contributors include prominent established figures as well as influential younger philosophers.

was splitting in two, he had to make an impossible decision. He followed his head over his gut and Karina was left permanently paralysed, altering both patient and surgeon's lives for ever. This decision would haunt Rahul for decades, a constant reminder of the fine line between saving and damaging a life. As one of the world's leading brain surgeons, Rahul is the last hope for patients with extreme forms of cancer. In treating them, he has observed humanity at its most raw and most robust. He has journeyed to unimaginable extremes with them, guiding them through the darkest moments of their lives. Life on a Knife's Edge is Rahul's poetic and beautifully written account of the resilience, courage and belief he has witnessed in his patients, and the lessons about human nature he has learned from them. It is about the impossible choices he has to make, and the fateful consequences he is forced to live

with. From challenging the ethics of surgical practices, to helping a patient with locked-in syndrome communicate her dying wish to her family, Rahul shares his extraordinary experiences, revealing the depths of a surgeon's psyche that is continuously pushed to its limits. Liver and Pancreatobiliary Surgery with Liver Transplantation Dr. Robert Sutcliffe 2010 The handbook provides concise descriptions of diseases affecting the liver, biliary tree and pancreas, including their management. The handbook is designed to be portable, enabling the trainee to quickly access information in the operating theatre or clinic without having to resort to larger texts.

Chhibber 2018-08-24 Indian party politics, commonly viewed as chaotic, clientelistic, and corrupt, is nevertheless a model for deepening democracy and accommodating diversity. Historically, though, observers have argued that Indian politics is non-ideological in nature. In contrast, Pradeep Chhibber and Rahul Verma contend that the Western European paradigm of "ideology" is not applicable to many contemporary multiethnic countries. In these more diverse states, the most important ideological debates center on statism-the extent to which the state should dominate and regulate society-and recognition-whether and how the state should accommodate various marginalized groups and protect minority rights from majorities. Using survey data from the Indian National Election Studies and evidence from the Constituent Assembly debates, they show how education, the

media, and religious practice transmit the competing ideas that lie at the heart of ideological debates in India.

India and Civilizational Futures

Vinay Lal 2019-07-10 This second volume based on the deliberations of the Backwaters Collective puts into serious question the most familiar humanistic inquiry and social science research until now. The contributors probe how the intellectual and cultural resources of Indic civilization might be deployed to introduce greater plurality into the world of modern knowledge systems and reinitiate metaphysics into the discourses of politics, with the hope that similar inquiries will in future be extended across the Global South. The chapters offer newer perspectives on India's past and intellectual traditions

and suggest how we might liberate ourselves from the straightjackets of history, development, normal politics, the nation-state, and what globally passes for 'common sense' in various spheres of life and thought. While some contributors engage with a few figures who have been critical in shaping India's intellectual life, such as Kabir, Narayana Guru, Ambedkar, Tagore, and Gandhi, others bring into the limelight equally compelling if somewhat neglected figures such as Rahul Sankrityayan, Ranade, and T.R.V. Murti. Conceptual papers on intercommunalism, South Asian ideas of hospitality, and mnemonic modes of learning complete the volume.

2020-03-09 Between 2009 and 2014, an anti-homosexuality law circulating in the Ugandan parliament came to be the focus of a global conversation about queer rights. The law attracted attention for the draconian nature of its provisions and for the involvement of US evangelical Christian activists who were said to have lobbied for its passage. Focusing on the Ugandan case, this book seeks to understand the encounters and entanglements across geopolitical divides that produce and contest contemporary queerphobias. It investigates the impact and memory of the colonial encounter on the politics of sexuality, the politics of religiosity of different Christian denominations, and the political economy of contemporary homophobic moral panics. In addition, *Out of Time* places the Ugandan experience in conversation with contemporaneous developments

in India and Britain--three locations that are yoked together by the experience of British imperialism and its afterlives. Intervening in a queer theoretical literature on temporality, Rahul Rao argues that time and space matter differently in the queer politics of postcolonial countries. By employing an intersectional analysis and drawing on a range of sources, Rao offers an original interpretation of why queerness mutates to become a metonym for categories such as nationality, religiosity, race, class, and caste. The book argues that these mutations reveal the deep grammars forged in the violence that founds and reproduces the social institutions in which queer difference struggles to make space for itself.

Philosophical Foundations of the Law of Torts John Oberdiek

A New Cold War Sanjaya Baru
2021-08-04 In July 1971, US National Security Advisor, Henry Kissinger, made a secret visit to China to meet top Chinese leaders. This inaugurated a new phase not just in US-China relations but in contemporary history. That visit and the subsequent US-China relationship, including the US decision to invest in China's economic rise and admit it into the WTO, combined to firm up the foundations of China's rise as a world power. For more than four decades, the leadership of the two countries had a secretive pact, which worked well to each other's benefit. The US helped power China's economic growth in the hope that Beijing would turn a new political leaf and adopt Western practices (e.g.

democracy). China grew economically and militarily, used its financial prowess to spread its influence across continents, as four generations of Chinese leaders built their nation at the expense of the US. Half a century after Kissinger's historic visit, the US and China are today engaged in a trade war bordering on a new Cold War. Washington is not openly talking about 'de-coupling' from China, which has begun to challenge its global dominance, but it might very well be. China has already established itself as a dominant power across Eurasia. More worryingly, China is militarily and economically threatening its neighbours, including Japan, Korea, Vietnam, Taiwan, Australia, Philippines, Indonesia and India. This collection of critical essays examines the impact, consequences and legacy of Kissinger's first, door-opening visit to China and how it has shaped world order.
