workshop feasible not in simple tribal villages but when new production institutions emerge with the development of a political hierarchy. It travels from the agricultural field to the building of the home (with its food-processing and storage facilities), to urban water supply techniques and transport mechanisms, to the use of stone, bronze and iron for tools and weapons. A glimpse is afforded of the difference between the making of pottery by hand and the use of the potter's wheel. The social circumstances required of pottery production are in turn contrasted with those required of metallurgy. The whole is based on the archaeological evidence of the Neolithic to Iron Age cultures of South Asia, and concurrently, on observations of some technological processes followed by villagers today. The book asks if it is the nature of tools available that could have made possible the use of materials

such as certain semi-precious stones or ivory. Which were the craft technologies that depended on bronze tools in the Indus cities? Else, it may have been horse-riding that prompted chiefs of southern India to sponsor the production of new kinds of iron weapons. It is, besides, possible that the charcoal requirements of early iron-smelting and forging are connected with localized deforestation, and that this had a role to play in the organization and dispersal of the industry. Why were masonry wells so rare after the Indus Valley civilization? Why is glass production known in the Bronze Age of Western Asia but in the Iron Age of South Asia? In what economic circumstances did people begin to use wheeled transport? Technology is not viewed here as a self-generating phenomenon. Instead, puzzles are explained by social and economic factors such as the nature of the work group and the resultant

Water and Scriptures K. V. Raju

2017-05-04 This collection of papers aims to draw lessons and apply indigenous knowledge, wisdom and cultural traditions to suit policy contexts describing the (a) role of individuals (b) communities, and (c) the state to ensure effectively manage water resources. Readers will discover ways in which water was conceptualized, conserved and managed. Contributions will also shed light on the historical, functional and futuristic perspectives of water resources management, and readers will be able to draw lessons and evolve policy guidelines. There are some studies related to scriptures across religions and their perceptions regarding ecological conservation. However, religious studies and their socio-economic and environmental relevance to society, more specifically to the current policy contexts, are

limited. This book attempts to bridge this gap, in terms of learning lessons from the past to effectively address the challenges of the present and future. The book will be useful for historians and research scholars studying the place of water in different cultures, water pricing and water sharing; as well as ecologists and environmental scientists.

Indische Kultur im Kontext

Klaus Mylius 2005 Indische Kultur im Kontext ist eine Festschrift zum 75. Geburtstag des international bekannten Indologen Klaus Mylius. Der Band enthält Beiträge von erstrangigen Vertretern der Indologie aus den USA, Japan, der Schweiz, Deutschland, Belgien, Ungarn, Finnland und

Indien. Weitere Artikel, die Themen aus anderen Kulturen mit Bezügen zu Indien behandeln, wurden von Freunden und Weggefährten des Jubilars verfasst. Das Spektrum der Beiträge spiegelt das umfangreiche Schaffen von Klaus Mylius wider. Mehrere Autoren behandeln Rituale und Texte des altindischen Veda, die über viele Jahrzehnte sein Hauptforschungsgebiet bildeten. Andere Artikel beschäftigen sich mit religions-, literatur- und wissenschaftsgeschichtlichen Themen der Indologie. Die nichtindologischen Themen, die größtenteils Bezüge zu Indien haben, behandeln etwa chinesische Legenden, die europäische Aufklärung oder das Bild der Venus in der Kunstgeschichte. Insgesamt demonstriert der Band eine Idee, die Klaus Mylius selbst immer verfolgt hat: Die adäquate Interpretation indischer Texte kann nur bei Beachtung der

The book deciphers the response and reactions of the host plant at molecular level. The chapter on 'Mechanism of Disease Resistance' explores its genetic basis, providing an insight into the breeding plants for disease resistance. The chapter entitled 'Plant Pathology, Society, Ethics and Environment' deals with all round views of applied plant pathology, issues of food safety and the role of plant pathology, bioterrorism, agroterrorism, biological warfare, etc. Four chapters comprehensively deal on latest molecular research work on: different approaches to unravel the mechanism of plant pathogenesis. The book (perhaps

overview of the developments made in the last 100 years. Chapters on significant achievements and current status of knowledge has been contributed by leading experts on mycology, bacteriology, virology and nematology, and also on epidemiological research, fungicide research, biological control, host plant resistance against pathogens and on the application of biotechnological approaches for management of plant diseases. This covered the major broad areas of research in plant pathology. Besides, non conventional chapters encompassing the areas of international co-operation, policy issues and uncommon opportunities are also included along with the role of professional societies of plant pathology in India. Though the volume by no way is a complete account of the vast ocean of information available on various aspects of the subject, it is

anticipated that the diverse areas covered in this volume will serve as a roadmap for the younger generation of plant pathologists and policy makers alike who have greater challenges ahead to resolve the pathological problems for augmenting production, ensuring bio-security and facilitating trade in under the changing global trade regime.

Religion and Sustainable

Agriculture Todd LeVasseur
2016-10-21 Distinct practices of eating are at the heart of many of the world's faith traditions -- from the Christian Eucharist to Muslim customs of fasting during Ramadan to the vegetarianism and asceticism practiced by some followers of Hinduism and Buddhism. What we eat, how we eat, and whom we eat with can express our core values and religious devotion more clearly than verbal piety. In this wide-ranging collection, eminent scholars, theologians, activists, and lay farmers illuminate how religious beliefs influence and are influenced by the values and practices of sustainable

agriculture. Together, they analyze a multitude of agricultural practices for their contributions to healthy, ethical living and environmental justice. Throughout, the contributors address current critical issues, including global trade agreements, indigenous rights to land and seed, and the effects of postcolonialism on farming and industry. Covering indigenous, Buddhist, Hindu, Christian, Muslim, and Jewish perspectives, this groundbreaking volume makes a significant contribution to the study of ethics and agriculture.
