Wings for Change Jan Jacob Stam 2016-06-06 This book is about organisational development from a systemic perspective. It is about systemic principles. How do they work in organisations? And how do people in those organisations experience them? This book attempts to answer this and many more questions on working with the systemic phenomenological perspective in organisations and society at large. From the same perspective, this book discusses a large amount of issues such as fraud, success, downturn and succession. This book includes many examples of organisations and themes, including constellations in South America, Europe, Russia and the US. Together, they make this book to be a Lonely Planet in the world of working in the systemic- phenomenological way. Jan Jacob Stam, founder of the Hellinger Institute in The Netherlands, and a very welcome teacher and lecturer in more than twenty countries, has been a leader and researcher in the field of systemic work for over 15 years. This book gives you a look into Jan Jacob's experiences and insights. And as always, he has moved on and continues to develop and search for new insights. There are so many interesting questions still unanswered. The Pythagorean Theorem Eli Maor 2019-11-19 An exploration of one of the most celebrated and well-known theorems in mathematics By any measure, the Pythagorean theorem is the most famous statement in all of mathematics. In this book, Eli Maor reveals the full story of this ubiquitous geometric theorem. Although attributed to Pythagoras, the theorem was known to the Babylonians more than a thousand years earlier. Pythagoras may have been the first to prove it, but his proof—if indeed he had one—is lost to us. The theorem itself, however, is central to almost every branch of science, pure or applied. Maor brings to life many of the characters that played a role in its history, providing a fascinating backdrop to perhaps our oldest enduring mathematical legacy.

The Year 1000 Valerie Hansen 2020-04-16 "Typically wide-ranging, informative, and illuminating . . . a lovely book" Peter Frankopan "A brilliant communicator . . . a wonderful [book]" Dan Snow _____ When did globalization begin? Most observers have settled on 1492, the year Columbus discovered America. But as celebrated Yale professor Valerie Hansen shows, it was the year 1000, when for the first time new trade routes linked the entire globe, so an object could in theory circumnavigate the world. This was the 'big bang' of globalization, which ushered in a new era of exploration and trade, and which paved the way for Europeans to dominate after Columbus reached America. Drawing on a wide range of new historical sources and cutting-edge archaeology, Hansen shows, for example, that the Maya began to trade with the native peoples of modern New Mexico from traces of theobromine - the chemical signature of chocolate - and that frozen

textiles found in Greenland contain hairs from animals that could only have come from North America. Moreover, Hansen turns accepted wisdom on its head, revealing not only that globalization began much earlier than previously thought, but also that the world's first anti-globalization riots did too, in cities such as Cairo, Constantinople, and Guangzhou. Introducing players from Europe, the Islamic world, Asia, the Indian Ocean maritime world, the Pacific and the Mayan world who were connecting the major landmasses for the first time, this compelling revisionist argument shows how these encounters set the stage for the globalization that would dominate the world for centuries to come. _____ "A lively and engrossing book that describes in fascinating detail how trade enriched the world" Gerard deGroot, The Times "A tour-de-force . . . offers many new ways of thinking about the past" Katrina Gulliver, Spectator "Provocative . . . a smart, broad-ranging survey of the global Middle Ages that is learned, thought-provoking - and perfectly tuned to our times" Dan Jones, Sunday Times

History of India Kittu Reddy 2015-04-24 Many years earlier, Sri Aurobindo had written in The Human Cycle: The objective view of society has reigned throughout the historical period of humanity in the West; it has been sufficiently strong though not absolutely engrossing in the East. Rulers, people, and thinkers alike have understood by their national existence a political status, the extent of their borders, their economic well-being and expansion, their laws, institutions and the working of these things. For this reason political and economic motives have everywhere predominated on the surface and history has been a record of their operations and influence. The one subjective and psychological force consciously admitted and with difficulty deniable has been that of the individual. This predominance is so great that most modern historians and some political thinkers have concluded that objective necessities are by law of Nature the only really determining forces; all else is result or superficial accidents of these forces. Scientific history has been conceived as if it must be a record and appreciation

of the environmental motives of political action, of the play of economic forces and developments and the course of institutional evolution. The few who still valued the psychological element have kept their eye fixed on individuals and are not far from conceiving of history as a mass of biographies. The truer and more comprehensive science of the future will see that these conditions only apply to the imperfectly self-conscious period of national development. Even then there was always a greater subjective force working behind individuals, policies, economic movements and the change of institutions; but it worked for the most part subconsciously, more as a subliminal self than as a conscious mind. This book is an attempt to write the history of India from the subjective viewpoint, without in any way distracting from the external events; on the contrary, it will enhance greatly and give meaning to the objective narration of external events that took place. The Indian people are by nature subjective in their approach to life; the stress in India has always been more on the inside than on the outside. This inwardness has been one of the striking features of Indian culture. An India without the great Vedic and Upanishadic scriptures and the spiritual personalities of Rama and Krishna would not be India any more. A study and appreciation of Indian history, therefore, demands more particularly a subjective understanding and appreciation. It may even be said that the study of Indian history demands an approach that values the impact of the highest truths and thought found in India's greatest scriptures, literature and mythology as well as the influence of the ideals lived and taught by Rama, Krishna, Buddha and a long list of Rishis and Saints. The impact of such inner forces in shaping the outer history of India is thus a key topic of inquiry for this book. Secondly, it is evident to serious thinkers that all human behaviour, whether on the individual or the collective plane, is the direct consequence of the inner psychological state. In this book an attempt has been made to interpret the events of Indian history from a psychological point of view. This does not mean that external events are any less important; rather they gain greater importance when seen in the light of the inner psychological vision and deeper forces behind them. The significance of external events lies in the meaning that a true subjectivism and an inward approach to knowledge alone can give. One of the most powerful subjective forces in history has been that of the individual. There have been times in the history of a nation when events have revolved around an individual personality. This book lays much stress on the impact of individual personalities.

Four Thousand Weeks Oliver Burkeman 2021-08-10 AN INSTANT NEW YORK TIMES BESTSELLER "Provocative and appealing . . . well worth your extremely limited time." –Barbara Spindel, *The Wall Street Journal* The average human lifespan is absurdly, insultingly brief. Assuming you live to be eighty, you have just over four thousand weeks. Nobody needs telling there isn't enough time. We're obsessed with our lengthening to-do lists, our overfilled inboxes, work-life balance, and the ceaseless battle against distraction; and we're deluged with advice on becoming more productive and efficient, and "life hacks" to optimize our days. But such techniques often end up making things worse. The sense of anxious hurry grows more intense, and still the most meaningful parts of life seem to lie just beyond the horizon. Still, we rarely make the connection between our daily struggles with

time and the ultimate time management problem: the challenge of how best to use our four thousand weeks. Drawing on the insights of both ancient and contemporary philosophers, psychologists, and spiritual teachers, Oliver Burkeman delivers an entertaining, humorous, practical, and ultimately profound guide to time and time management. Rejecting the futile modern fixation on "getting everything done," *Four Thousand Weeks* introduces readers to tools for constructing a meaningful life by embracing finitude, showing how many of the unhelpful ways we've come to think about time aren't inescapable, unchanging truths, but choices we've made as individuals and as a society—and that we could do things differently.

Women's Work: The First 20,000 Years Women, Cloth, and Society in Early Times

Elizabeth Wayland Barber 1995-09-17 "A fascinating history of...[a craft] that preceded and made possible civilization itself." —New York Times Book Review New discoveries about the textile arts reveal women's unexpectedly influential role in ancient societies. Twenty thousand years ago, women were making and wearing the first clothing created from spun fibers. In fact, right up to the Industrial Revolution the fiber arts were an enormous economic force, belonging primarily to women. Despite the great toil required in making cloth and clothing, most books on ancient history and economics have no information on them. Much of this gap results from the extreme perishability of what women produced, but it seems clear that until now descriptions of prehistoric and early historic cultures have omitted virtually half the picture. Elizabeth Wayland Barber has drawn from data gathered by the most sophisticated new archaeological methods—methods she herself helped to fashion. In a "brilliantly original book" (Katha Pollitt, Washington Post Book World), she argues that women were a powerful economic force in the ancient world, with their own industry: fabric.

1000 Years of Annoying the French Stephen Clarke 2015-06-05 Was the Battle of Hastings a French victory? Non! William the Conqueror was Norman and hated the French. Were the Brits really responsible for the death of Joan of Arc? Non! The French sentenced her to death for wearing trousers. Was the guillotine a French invention? Non! It was invented in Yorkshire. Ten centuries' worth of French historical 'facts' bite the dust as Stephen Clarke looks at what has really been going on since 1066 ... From the Norman (not French) Conquest, to XXX, it is a light-hearted - but impeccably researched - account of all out great-fallings out. In short, the French are quite right to suspect that the last 1,000 years have been one long British campaign to infuriate them. And it's not over yet...

1000 Years for Revenge Peter Lance 2009-03-17 *1000 Years for Revenge* is a groundbreaking investigative work that uncovers startling evidence of how the FBI missed dozens of opportunities to stop the attacks of September 11, dating back to 1989. Award-winning journalist Peter Lance explains how an elusive al Qaeda mastermind defeated the entire American security system in what the author calls "the greatest failure of intelligence since the Trojan Horse." An unparalleled work of investigative

reporting and masterful storytelling, *1000 Years for Revenge* will change forever the way we look at the FBI and the war on terror in the twenty-first century. Work James Suzman 2022-01-18 "This book is a tour de force." -- Adam Grant, New York Times bestselling author of *Give and Take* A revolutionary new history of humankind through the prism of work by leading anthropologist James Suzman *Work* defines who we are. It determines our status, and dictates how, where, and with whom we spend most of our time. It mediates our self-worth and molds our values. But are we hard-wired to work as hard as we do? Did our Stone Age ancestors also live to work and work to live? And what might a world where work plays a far less important role look like? To answer these questions, James Suzman charts a grand history of "work" from the origins of life on Earth to our ever more automated present, challenging some of our deepest assumptions about who we are. Drawing insights from anthropology, archaeology, evolutionary biology, zoology, physics, and economics, he shows that while we have evolved to find joy meaning and purpose in work, for most of human history our ancestors worked far less and thought very differently about work than we do now. He demonstrates how our contemporary culture of work has its roots in the agricultural revolution ten thousand years ago. Our sense of what it is to be human was transformed by the transition from foraging to food production, and, later, our migration to cities. Since then, our relationships with one another and with our environments, and even our sense of the passage of time, have not been the same. Arguing that we are in the midst of a similarly transformative point in history, Suzman shows how automation might revolutionize our relationship with work and in doing so usher in a more sustainable and equitable future for our world and ourselves.

A Thousand Years of Nonlinear History Manuel De Landa 1997 More than a simple expository history, *A Thousand Years of Nonlinear History* sketches the outlines of a renewed materialist philosophy of history in the tradition of Fernand Braudel, Gilles Deleuze, and Félix Guattari, while also engaging the critical new understanding of material processes derived from the sciences of dynamics. Following in the wake of his groundbreaking *War in the Age of Intelligent Machines*, Manuel De Landa presents a radical synthesis of historical development over the last one thousand years. More than a simple expository history, *A Thousand Years of Nonlinear History* sketches the outlines of a renewed materialist philosophy of history in the tradition of Fernand Braudel, Gilles Deleuze, and Félix Guattari, while also engaging the critical new understanding of material processes derived from the sciences of dynamics. Working against prevailing attitudes that see history as an arena of texts, discourses, ideologies, and metaphors, De Landa traces the concrete movements and interplays of matter and energy through human populations in the last millennium. De Landa attacks three domains that have given shape to human societies: economics, biology, and linguistics. In every case, what one sees is the self-directed processes of matter and energy interacting with the whim and will of human history itself to form a panoramic vision of the West free of rigid teleology and naive notions of progress, and even more important, free of any deterministic source of its urban, institutional, and technological forms. Rather, the source of all concrete forms in the West's history are shown to derive from internal morphogenetic capabilities that lie within the flow of matter-energy itself.

Work Andrea Komlosy 2018-03-27 Tracing the complexity and contradictory nature of work throughout history. Say the word "work," and most people think of some form of gainful employment. Yet this limited definition has never corresponded to the historical experience of most people—whether in colonies, developing countries, or the industrialized world. That gap between common assumptions and reality grows even more pronounced in the case of women and other groups excluded from the labour market. In this important intervention, Andrea Komlosy demonstrates that popular understandings of work have varied radically in different ages and countries. Looking at labour history around the globe from the thirteenth to the twenty-first centuries, Komlosy sheds light on both discursive concepts as well as the concrete coexistence of multiple forms of labour—paid and unpaid, free and unfree. From the economic structures and ideological mystifications surrounding work in the Middle Ages, all the way to European colonialism and the industrial revolution, Komlosy's narrative adopts a distinctly global and feminist approach, revealing the hidden forms of unpaid and hyper-exploited labour which often go ignored, yet are key to the functioning of the capitalist world-system. *Work: The Last 1,000 Years* will open readers' eyes to an issue much thornier and more complex than most people imagine, one which will be around as long as basic human needs and desires exist.

It covers the ancient world, the Roman Republic and Empire, Medieval Europe, the first centuries of the U.S. and Canada, the French Revolution, the 19th century, World Wars I and II, the Nazis, the Soviets, postwar rent control, and the 1970s. It also includes a very helpful conclusion spelling out the theory of wage and price controls. This book is a treasure, and super entertaining!

The Hockey Stick and the Climate Wars Michael E. Mann 2013-10-01 The ongoing assault on climate science in the United States has never been more aggressive, more blatant, or more widely publicized than in the case of the Hockey Stick

graph—a clear and compelling visual presentation of scientific data, put together by Michael E. Mann and his colleagues, demonstrating that global temperatures have risen in conjunction with the increase in industrialization and the use of fossil fuels. Here was an easy-to-understand graph that, in a glance, posed a threat to major corporate energy interests and those who do their political bidding. The stakes were simply too high to ignore the Hockey Stick—and so began a relentless attack on a body of science and on the investigators whose work formed its scientific basis. The Hockey Stick achieved prominence in a 2001 UN report on climate change and quickly became a central icon in the “climate wars.” The real issue has never been the graph’s data but rather its implied threat to those who oppose governmental regulation and other restraints to protect the environment and planet. Mann, lead author of the original paper in which the Hockey Stick first appeared, shares the story of the science and politics behind this controversy. He reveals key figures in the oil and energy industries and the media front groups who do their bidding in sometimes slick, sometimes bare-knuckled ways. Mann concludes with the real story of the 2009 “Climategate” scandal, in which climate scientists’ emails were hacked. This is essential reading for all who care about our planet’s health and our own well-being.

Sapiens Yuval Noah Harari 2015-02-10 New York Times Bestseller A Summer Reading Pick for President Barack Obama, Bill Gates, and Mark Zuckerberg From a renowned historian comes a groundbreaking narrative of humanity’s creation and evolution—a #1 international bestseller—that explores the ways in which biology and history have defined us and enhanced our understanding of what it means to be “human.” One hundred thousand years ago, at least six different species of humans inhabited Earth. Yet today there is only one—homo sapiens. What happened to the others? And what may happen to us? Most books about the history of humanity pursue either a historical or a biological approach, but Dr. Yuval Noah Harari breaks the mold with this highly original book that begins about 70,000 years ago with the appearance of modern cognition. From examining the role evolving humans have played in the global ecosystem to charting the rise of empires, *Sapiens* integrates history and science to reconsider accepted narratives, connect past developments with contemporary concerns, and examine specific events within the context of larger ideas. Dr. Harari also compels us to look ahead, because over the last few decades humans have begun to bend laws of natural selection that have governed life for the past four billion years. We are acquiring the ability to design not only the world around us, but also ourselves. Where is this leading us, and what do we want to become? Featuring 27 photographs, 6 maps, and 25 illustrations/diagrams, this provocative and insightful work is sure to spark debate and is essential reading for aficionados of Jared Diamond, James Gleick, Matt Ridley, Robert Wright, and Sharon Moalem.

Naturally Composed Marty Straub 2016-08-12 A look at why we are interested in what we see in art. Are we born with aesthetic preferences that are shaped by cultural influences? Is our natural attraction to Beauty another weapon in our arsenal of species' survival? This book examines many so-called rules of composition in the visual arts to find natural reasons for their existence. It is designed to aide the visual artist and those who appreciate their work by bringing attention to subtle cues of attraction cultivated by our ancient and immediate ancestors. There are many examples of photos in the book, and the reader is again asked to insert their own examples to enforce or refute the claims.

Astronomy Vs. History* dissects every historical age and analyses the data from every source imaginable ??" Greek and Egyptian chronology take a good beating, and it goes rapidly downhill from there. *Almagest* that is supposed to have been written in the 2nd century A.D. by Ptolemy dates to 16th century; Tycho Brahe, Ptolemy and Copernicus take the blame for taking part in creation of the legend of a mythical Classical Age that never was and misdating medieval events as very ancient ones. In *Astronomy Vs. History* we are reminded of the crucial role of eclipses in verifying the dating of major historical events, of stone Zodiacs containing the true dates of such events. Our perception of history begins to change dramatically even before we're through with *Astronomy Vs. History*.

The Dawn of Everything David Graeber 2021-11-09 INSTANT NEW YORK TIMES BESTSELLER A dramatically new understanding of human history, challenging our most fundamental assumptions about social evolution—from the development of agriculture and cities to the origins of the state, democracy, and inequality—and revealing new possibilities for human emancipation. For generations, our remote ancestors have been cast as primitive and childlike—either free and equal innocents, or thuggish and warlike. Civilization, we are told, could be achieved only by sacrificing those original freedoms or, alternatively, by taming our baser instincts. David Graeber and David Wengrow show how such theories first emerged in the eighteenth century as a conservative reaction to powerful critiques of European society posed by Indigenous observers and intellectuals. Revisiting this encounter has startling implications for how we make sense of human history today,

including the origins of farming, property, cities, democracy, slavery, and civilization itself. Drawing on pathbreaking research in archaeology and anthropology, the authors show how history becomes a far more interesting place once we learn to throw off our conceptual shackles and perceive what's really there. If humans did not spend 95 percent of their evolutionary past in tiny bands of hunter-gatherers, what were they doing all that time? If agriculture, and cities, did not mean a plunge into hierarchy and domination, then what kinds of social and economic organization did they lead to? The answers are often unexpected, and suggest that the course of human history may be less set in stone, and more full of playful, hopeful possibilities, than we tend to assume. The Dawn of Everything fundamentally transforms our understanding of the human past and offers a path toward imagining new forms of freedom, new ways of organizing society. This is a monumental book of formidable intellectual range, animated by curiosity, moral vision, and a faith in the power of direct action. Includes Black-and-White Illustrations

The Turnaway Study Diana Greene Foster 2021-06 "A groundbreaking and illuminating look at the state of abortion access in America and the first long-term study of the consequences--emotional, physical, financial, professional, personal, and psychological--of receiving versus being denied an abortion on women's lives"--
The Tale of Genji Murasaki Shikibu 2013-02-06 In the eleventh century Murasaki Shikibu, a lady in the Heian court of Japan, wrote the world's first novel. But *The Tale of Genji* is no mere artifact. It is, rather, a lively and astonishingly nuanced portrait of a refined society where every dalliance is an act of political consequence, a play of characters whose inner lives are as rich and changeable as those imagined by Proust. Chief of these is "the shining Genji," the son of the emperor and a man whose passionate impulses create great turmoil in his world and very nearly destroy him. This edition, recognized as the finest version in English, contains a dozen chapters from early in the book, carefully chosen by the translator, Edward G. Seidensticker, with an introduction explaining the selection. It is illustrated throughout with woodcuts from a seventeenth-century edition.

The Story of Work Jan Lucassen 2021-07-27 The first truly global history of work, an upbeat assessment from the age of the hunter-gatherer to the present day We work because we have to, but also because we like it: from hunting-gathering over 700,000 years ago to the present era of zoom meetings, humans have always worked to make the world around them serve their needs. Jan Lucassen provides an inclusive history of humanity's busy labor throughout the ages. Spanning China, India, Africa, the Americas, and Europe, Lucassen looks at the ways in which humanity organizes work: in the household, the tribe, the city, and the state. He examines how labor is split between men, women, and children; the watershed moment of the invention of money; the collective action of workers; and at the impact of migration, slavery, and the idea of leisure. From peasant farmers in the first agrarian societies to the precarious existence of today's gig workers, this

surprising account of both cooperation and subordination at work throws essential light on the opportunities we face today.

Three Views on the Millennium and Beyond Zondervan, 2010-08-10 Is there biblical evidence for a thousand-year earthly kingdom (the Millennium) ruled by Christ before the fulfillment of the new heaven and new earth? Revelation chapter 20 seems to suggest so, but few books of the Bible are so difficult to interpret. And a discussion of the Millennium branches out into many other theological questions about the end times (eschatology): Are these the last days? What must happen before Jesus returns? What part does the church play? This Counterpoints volume compares three views of the Millennium: Premillennial: Christ will come again before this kingdom is established. Postmillennial: our present age represents that kingdom and that the church is and must move toward the fulfillment of this kingdom. Amillennial: a future Millennium is not a literal kingdom, and when Christ returns, he will usher in an immediate new heaven and new earth. Robert B. Strimple, Kenneth L. Gentry Jr., and Craig A. Blaising offer their perspectives, giving their exegetical reasoning. Each of them then responds to the views held by their peers in a respectful and informative setting, making it easy for you to compare their beliefs and gain a better understanding of how this aspect of Christianity's great hope--the return of Jesus--is understood by the church. The Counterpoints series presents a comparison and critique of scholarly views on topics important to Christians that are both fair-minded and respectful of the biblical text. Each volume is a one-stop reference that allows readers to evaluate the different positions on a specific issue and form their own, educated opinion.

Loaded marquis de Sade 1990 *The 120 Days of Sodom* is Sade's masterpiece. A still unsurpassed catalogue of sexual aberrations and the first systematic exploration of the psychopathology of sex, it was written during Sade's imprisonment and then lost after the storming of the Bastille in 1789. Later rediscovered, the manuscript remained unpublished until 1936 and is now introduced by Simone de Beauvoir's landmark essay, 'Must We Burn Sade?' Unique in its enduring capacity to shock and provoke, *The 120 days of Sodom* must stand as one of the most controversial books ever written
